

INCREASED SAFETY IN TUNNELS WITH CAMERA SYSTEMS FROM ISG

CAMERA SYSTEMS FROM ISG MONITOR TUNNELS ALL OVER SWEDEN

ISG has extensive experience of traffic and tunnel projects, especially in combination with CCTV and detection systems. The technology in the systems has been developed and used for many years and ISG's solution which can combine information from different detection systems regardless of the technology and brand, is unique.

One of ISG's traffic projects is the tunnel Norra Länken in Stockholm where approximately 500 cameras monitor the tunnel together with radar detection. To increase the safety further 250 emergency phones supplied by ISG, enable communication between different areas in the tunnel directly to the Swedish Transport Administration's existing exchange in Trafik Stockholm.

IMPRESSIVE LIST OF INFRASTRUCTURE ASSIGNMENTS

Almost 1300 tunnel cameras from ISG are installed in Sweden and 2012 Norway received one of its first systems from ISG.

- Södra Länken, Stockholm
- Götatunneln, Gothenburg
- Gnistängstunneln, Gothenburg
- Traffic surveillance of the surface road network, Gothenburg
- Götaleden, Gothenburg
- Malmö Ring Road, Malmö
- Tingstadstunneln, Gothenburg
- Skultorpstunneln (Pansartunneln), Skövde
- Norrortsleden (Häggvikstunneln, Törnskogstunneln and Löttingetunneln), Stockholm
- Lundbytunneln, Gothenburg
- Lindhagentunneln, Stockholm
- Hvalertunneln, Norway
